

ARRANGEMENT IN A LOCAL COMPUTER FOR SENDING VOICE MESSAGES TO A UNIFIED COMMUNICATIONS SYSTEM

ABSTRACT OF THE DISCLOSURE

A user computer, for example a personal computer (PC), includes a recorder configured for generating an audio file having an identifier enabling a unified messaging system to identify the audio file as a voice message, and an e-mail client configured for sending the audio file to a prescribed destination corresponding to a unified messaging subscriber voice mail inbox, enabling the unified messaging subscriber to use the unified messaging system for retrieval of the audio file as a stored voice message.
